PROFESSIONAL SUMMARY:

I work at the intersection of business and data, with a clear focus: turning analysis into decisions that matter. My background combines commercial understanding with technical expertise in data science, which allows me to connect what companies do with what their data actually reveals. In my work, I help teams see their performance clearly, uncover where things break down, and decide what to do next. By translating data into clear priorities, I contribute not only to day-to-day operations but also to shaping business strategy. Working with automotive clients, I've built end-to-end analytics solutions, from data pipelines to reporting that support both operational execution and strategic direction. This experience has shaped how I approach data: not as an output, but as a tool for driving real business impact. At the same time, I am deepening this approach through my master's thesis, where I am developing an AI-driven forecasting model in collaboration with the industry to predict market dynamics and support better commercial decisions. For me, technical work is never the end goal, it's how I create clarity, align data with business reality, and help organizations make better strategic choices.

PROFESSIONAL EXPERIENCE:

Junior Data Scientist — Indicata (Aurora Group)

Apr 2025 – Present

- Design and develop Power BI dashboards to transform automotive market data into actionable insights, enabling stakeholders to monitor performance and support product and business decisions.
 - Develop ETL pipelines and automate data workflows using Databricks, PySpark, SQL, and DLT, improving data availability and reporting reliability.
 - Perform data modeling using star schema design to structure datasets for efficient and scalable reporting.
 - Develop a user performance dashboard to track key metrics and user behavior, replacing manual processes and enabling early identification of churn patterns.
 - Present findings to stakeholders, translating technical results into business insights that shape strategic priorities and support data-driven decision-making.
-

Account Manager — Airwallet

May 2022 – Aug 2023

- Supported B2B sales and client relationships for SaaS solutions in the French market.
- Assisted with prospecting, proposal development, and partnership activities.
- Represented the company at international fairs and contributed to market development activities in the French market.
- Developed communication and stakeholder management skills in a fast-paced startup environment.

Data Research Analyst — ForeFlight

Jan 2020 – July 2022

- Collected, validated, and maintained aviation data from multiple sources, ensuring high data accuracy and reliability for operational use.
- Contributed to structured data handling and data quality processes, supporting consistent datasets and enabling reliable downstream analysis and decision-making

Tutor — SDU (Volunteering)

August 2025 – Present

- Organize learning activities and supported collaboration within the study program, helping create an inclusive and engaging learning environment.
- Deliver a hands-on Power BI session, introducing dashboarding and data workflows and supporting knowledge sharing among students.

TECHNICAL SKILLS:

Languages & Tools: Python, SQL, R, PySpark, Databricks

BI & Visualization: Power BI, DAX, Excel

Data & Analytics: ETL/ELT Pipelines, Data Modeling, Data Analysis, AI/ML

BUSINESS & ANALYTICAL SKILLS:

Data-Driven Decision Making, Performance Analysis, Stakeholder Communication

EDUCATION:

MSc in Data Science (Economics & Business Administration)

Syddansk Universitet (SDU), Kolding, Denmark

Sep 2024 – Graduating June 2026

Bachelor in International Sales & Marketing

UCL University College, Odense, Denmark

2021 – 2023
